Description

of Follistatin mRNA yields two isoforms, FS315 and FS288. FS288 is the main cell-surface form and binds to surface heparin sulphate proteoglycans. FST/4282 recognizes recombinant human Follistatin 288, allowing for detection of FSH levels using various analysis methods. This antibody also works in a two site ELISA with <u>FST/4281</u>.

Application Notes

Optimal dilution of the Follistatin antibody should be determined by the researcher.

Immunogen

Recombinant human FS288 protein was used as the immunogen for the Follistatin antibody.

Storage

Store the Follistatin antibody at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
