## Description

This gene belongs to subfamily P of the forkhead box (FOX) transcription factor family. Forkhead box transcription factors play important roles in the regulation of tissue- and cell type-specific gene transcription during both development and adulthood. Many members of the forkhead box gene family, including members of subfamily P, have roles in mammalian oncogenesis. This gene may play a role in the development of tumors of the kidney and larynx. Alternative splicing of this gene produces multiple transcript variants, some encoding different isoforms. [provided by RefSeq].

## Application Notes

Titration of the FOXP4 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

## Immunogen

A portion of amino acids 522-550 from the human protein was used as the immunogen for this FOXP4 antibody.

## Storage

Aliquot the FOXP4 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
