## Description

It recognizes a 32kDa protein, which is identified as homodimer of galectin-13 (also known as PP13). Galectins are a family of soluble beta-galactoside-binding lectins that modulate cell-to-cell adhesion and cell-to-extracellular matrix (ECM) interactions and play a role in tumor progression, pre-mRNA splicing and apoptosis. One such member, galectin-13, is a 139 amino acid protein that contains one galectin domain. Possessing lysophospholipase activity, galectin-13 exists as a disulfide-linked homodimer. Galectin-13 is suggested to have a developmental role in the placenta and may display immunobiological activity in feto-maternal blood-spaces. Screening for galectin-13 in maternal serum during the first trimester of pregnancy may serve as a diagnostic marker to predict preterm pre-eclampsia.

## Application Notes

Optimal dilution of the Galectin 13 antibody should be determined by the researcher.

## Immunogen

A recombinant human Galectin-13 protein fragment (amino acids 1-139) was used as the immunogen for the Galectin 13 antibody.

## Storage

Aliquot the Galectin 13 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
