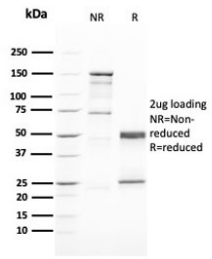
IHC testing of FFPE human breast carcinoma with GATA3 antibody. Required HIER: boil tissue sections in 10mM citrate buffer, pH 6, for 10-20 min and allow to cool prior to testing.



SDS-PAGE analysis of purified, BSA-free GATA3 antibody as confirmation of integrity and purity.

Description

GATA3 is a zinc finger transcription factor and plays an important role in promoting and directing cell proliferation, development, and differentiation in many tissues and cell types. GATA3 expression is primarily seen in breast and urothelial carcinomas. Therefore, GATA3 antibody can be useful in the identification of unknown primary carcinoma when carcinomas of the breast or bladder are a possibility.

Application Notes

Optimal dilution of the GATA3 antibody should be determined by the researcher.

1. The prediluted format is supplied in a dropper bottle and is optimized for use in IHC. After epitope retrieval step (if required), drip mAb solution onto the tissue section and incubate at RT for 30 min.

Immunogen

A portion of amino acids 357-463 from the human protein were used as the immunogen for this GATA3 antibody.

Storage

Store the GATA3 antibody at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
