## Description

Glucose transporter 3 (or GLUT3), also known as solute carrier family 2, facilitated glucose transporter member 3 (SLC2A3) is a protein that in humans is encoded by the SLC2A3 gene. GLUT3 facilitates the transport of glucose across the plasma membranes of mammalian cells. GLUT3 is most known for its specific expression in neurons and has originally been designated as the neuronal GLUT. GLUT3 has been studied in other cell types with specific glucose requirements, including sperm, preimplantation embryos, circulating white blood cells and carcinoma cell lines. [Wiki]

## Application Notes

Optimal dilution of the GLUT3 antibody should be determined by the researcher.

## Immunogen

A synthetic peptide specific to human GLUT3 / SLC2A3 was used as the immunogen for the GLUT3 antibody.

## Storage

Store the GLUT3 antibody at -20oC.
