Description

Cell surface heparan sulfate proteoglycans are composed of a membrane-associated protein core substituted with a variable number of heparan sulfate chains. Members of the glypican-related integral membrane proteoglycan family (GRIPS) contain a core protein anchored to the cytoplasmic membrane via a glycosyl phosphatidylinositol linkage. These proteins may play a role in the control of cell division and growth regulation.

Application Notes

Optimal dilution of the Glypican 5 antibody should be determined by the researcher.

Immunogen

Recombinant human protein (amino acids Q28-D538) was used as the immunogen for the Glypican 5 antibody.

Storage

After reconstitution, the Glypican 5 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
