Description

Vigilin is a protein that in humans is encoded by the HDLBP gene. The protein encoded by this gene binds high density lipoprotein (HDL) and may function to regulate excess cholesterol levels in cells. The encoded protein also binds RNA and can induce heterochromatin formation.

Application Notes

Optimal dilution of the HDLBP antibody should be determined by the researcher.

Immunogen

An E.coli-derived human recombinant protein (amino acids H15-A1231) was used as the immunogen for the HDLBP antibody.

Storage

After reconstitution, the HDLBP Antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
