Description

HIC2 Antibody specifically detects Hypermethylated in cancer 2 protein. HIC2 (HIC ZBTB Transcriptional Repressor 2) is

a Protein Coding gene. Diseases associated with HIC2 include Orofaciodigital Syndrome X and Simpson-Golabi-Behmel Syndrome, Type 1. HIC2 contains 5 C2H2-type zinc fingers and 1 BTB (POZ) domain. It belongs to the krueppel C2H2-type zinc-finger protein family, Hic subfamily and is a transcriptional repressor. It is a transcription activator of SIRT1.

Explore our HIC2 Antibody / Transcriptional Regulation Marker page for additional validation data and research applications involving zinc finger transcription factors, developmental signaling pathways, and nuclear gene expression control mechanisms.

Application Notes

Optimal dilution of the HIC2 antibody should be determined by the researcher.

Immunogen

Recombinant full-length human protein was used as the immunogen for the HIC2 antibody.

Storage

Aliquot the HIC2 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
