HSP90B1 AAHG-8 Antibody WB. Western blot testing of human HeLa cell lysate with HSP90B1 antibody, clone AAHG-8. Predicted molecular weight ~94 kDa.

Description

The HSP90B1 gene encodes a member of a family of adenosine triphosphate(ATP)-metabolizing molecular chaperones with roles in stabilizing and folding other proteins. The encoded protein is localized to melanosomes and the endoplasmic reticulum. Expression of this protein is associated with a variety of pathogenic states, including tumor formation. [RefSeq]
