HSPA1A antibody western blot analysis in HL-60 lysate.

Confocal immunofluorescent analysis of HSPA1A antibody with HeLa cells followed by Alexa Fluor 488-conjugated goat anti-mouse lgG (green). DAPI was used as a nuclear counterstain (blue).

Description

This intronless gene encodes a 70kDa heat shock protein which is a member of the heat shock protein 70 family. In conjuction with other heat shock proteins, this protein stabilizes existing proteins against aggregation and mediates the folding of newly translated proteins in the cytosol and in organelles. It is also involved in the ubiquitin-proteasome pathway through interaction with the AU-rich element RNA-binding protein 1. The gene is located in the major histocompatibility complex class III region, in a cluster with two closely related genes which encode similar proteins.

For an additional monoclonal antibody to HSPA1A with Western blot and immunohistochemistry validation, see our HSPA1A Antibody / Heat Shock Protein 70 1A Antibody page.

Application Notes

Titration of the HSPA1A antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 574-600 from the human protein was used as the immunogen for this HSPA1A antibody.

Storage

Aliquot the HSPA1A antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
