Description

This gene is a member of the insulin-like growth factor binding protein (IGFBP) family and encodes a protein with an IGFBP domain and a thyroglobulin type-I domain. The protein binds both insulin-like growth factors (IGFs) I and II and circulates in the plasma in both glycosylated and non-glycosylated forms. Binding of this protein prolongs the half-life of the IGFs and alters their interaction with cell surface receptors.

Application Notes

Titration of the IGFBP4 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 96-124 from the human protein was used as the immunogen for this IGFBP4 antibody.

Storage

Aliquot the IGFBP4 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
