Description

Interferon (IFN)- translated precursor is 166 amino acids, including the 23 amino acid secretory sequence. Multiple forms exist due to variable glycosylation and under non-denaturing conditions due to dimers and tetramers.

For an alternative recombinant monoclonal clone targeting IFNG, see our Interferon gamma Antibody rIFNG/4467 / Type II Interferon Antibody page.

Application Notes

Optimal dilution of the Interferon gamma Antibody G-30 should be determined by the researcher.

Immunogen

Purified recombinant human IFN gamma was used as the immunogen for the Interferon gamma Antibody G-30.

Storage

Store the Interferon gamma Antibody G-30 at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
