Description

IQGAP2 Rabbit Polyclonal Antibody detects IQGAP2. This gene encodes a member of the IQGAP family. The protein contains three IQ domains, one calponin homology domain, one Ras-GAP domain and one WW domain. It interacts with components of the cytoskeleton, with cell adhesion molecules, and with several signaling molecules to regulate cell morphology and motility.

For additional research options, explore our IQGAP2 Antibody, a polyclonal reagent with Western blot, IHC, immunofluorescence, flow cytometry, and knockout validation data.

Application Notes

Titration of the IQGAP2 Rabbit Polyclonal Antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 1436-1463 from the human protein was used as the immunogen for this IQGAP2 antibody.

Storage

Aliquot the IQGAP2 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
