## Description

This mAb is specific to kappa light chain of immunoglobulin and shows no cross-reaction with lambda light chain or any of the five heavy chains. In mammals, the two light chains in an antibody are always identical, with only one type of light chain, kappa or lambda. The ratio of Kappa to Lambda is 70:30. However, with the occurrence of multiple myeloma or other B-cell malignancies this ratio is disturbed. Antibody to the kappa light chain is reportedly useful in the identification of leukemias, plasmacytomas, and certain non-Hodgkin's lymphomas. Demonstration of clonality in lymphoid infiltrates indicates that the infiltrate is malignant.

## Application Notes

The optimal dilution of the Kappa Light Chain antibody for each application should be determined by the researcher.

## Immunogen

Recombinant human Ig kappa chain was used as the immunogen for this Kappa Light Chain antibody.

## Storage

Store the Kappa Light Chain antibody at 2-8°C (with azide) or aliquot and store at -20°C or colder (without azide).
