| <b>Availability</b>       | 1-3 business days  |
| <b>Species Reactivity</b> | Human  |
| <b>Format</b>             | Antigen affinity purified                                |
| <b>Host</b>               | Rabbit   |
| <b>Clonality</b>          | Polyclonal (rabbit origin)                               |
| <b>Isotype</b>            | Rabbit IgG   |
| <b>Purity</b>             | Antigen affinity purified                                |
| <b>Buffer</b>             | Lyophilized from 1X PBS with 2% Trehalose                |
| <b>UniProt</b>            | O15554   |
| <b>Applications</b>       | Western Blot : 0.5-1ug/ml<br>Direct ELISA : 0.1-0.5ug/ml |
| <b>Limitations</b>        | This KCa3.1 antibody is available for research use only. |

Western blot testing of human placental tissue lysate with KCa3.1 antibody. Predicted molecular weight ~48 kDa.

## Description

Intermediate conductance calcium-activated potassium channel protein 1 (KCNN4, Kca3.1) is part of a potentially heterotetrameric voltage-independent potassium channel that is activated by intracellular calcium. Activation is followed by membrane hyperpolarization, which promotes calcium influx. KCNN4 may be part of the predominant calcium-activated potassium channel in T-lymphocytes. This gene is similar to other KCNN family potassium channel genes, but it differs enough to possibly be considered as part of a new subfamily.

## Application Notes

Optimal dilution of the KCa3.1 antibody should be determined by the researcher.

## Immunogen

Recombinant human protein (amino acids M1-A400) was used as the immunogen for the KCa3.1 antibody.

## Storage

After reconstitution, the KCa3.1 antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
