Description

This gene encodes a member of an evolutionarily conserved protein family implicated in RNA metabolism and translation. Members of this family are characterized by the presence of an La motif, which is often located adjacent to one or more RNA recognition motifs (RRM). Together, the two motifs constitute the functional region of the protein and enable its interaction with the RNA substrate. This protein family is divided into five sub-families: the genuine La proteins and four La-related protein (LARP) sub-families. The protein encoded by this gene belongs to LARP sub-family 4. It is a cytoplasmic protein that may play a stimulatory role in translation.

Application Notes

Optimal dilution of the LARP4B antibody should be determined by the researcher.

Immunogen

Recombinant human protein (amino acids R241-K684) was used as the immunogen for the LARP4B antibody.

Storage

After reconstitution, the LARP4B antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at

20oC. Avoid repeated freezing and thawing.
