Description

LRRC34 is a 419 amino acid protein that contains 2 LRR repeats. The gene encoding LRRC34 maps to chromosome 3, which encodes over 1,100 genes. Particular regions of the chromosome 3 short arm are deleted in many types of cancer cells. Marfan Syndrome, porphyria, von Hippel-Lindau syndrome, osteogenesis imperfecta and Charcot-Marie-Tooth Disease are a few of the numerous genetic diseases associated with chromosome 3.

Application Notes

Optimal dilution of the LRRC34 antibody should be determined by the researcher.

Immunogen

An E.coli-derived human recombinant protein (amino acids M221-P464) was used as the immunogen for the LRRC34 antibody.

Storage

After reconstitution, the LRRC34 Antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
