Description

MAD2L1-binding protein is a protein that in humans is encoded by the MAD2L1BP gene. The protein encoded by this gene was identified as a binding protein of the MAD2 mitotic arrest deficient-like 1 (MAD2/MAD2L1). MAD2 is a key component of the spindle checkpoint that delays the onset of anaphase until all the kinetochores are attached to the spindle. This protein may interact with the spindle checkpoint and coordinate cell cycle events in late mitosis. Alternatively spliced transcript variants encoding distinct isoforms have been observed.

Application Notes

Optimal dilution of the MAD2L1BP antibody should be determined by the researcher.

Immunogen

An E.coli-derived human recombinant protein (Y20-E274) was used as the immunogen for the MAD2L1BP antibody.

Storage

After reconstitution, the MAD2L1BP antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
