MEF2D antibody western blot analysis in 293 lysate.

Description

MEF2D is a transcriptional activator which binds specifically to the MEF2 element, 5'-YTA[AT](4)TAR-3', found in numerous muscle-specific, growth factor-and stress-induced genes. Mediates cellular functions not only in skeletal and cardiac muscle development, but also in neuronal differentiation and survival. Plays diverse roles in the control of cell growth, survival and apoptosis via p38 MAPK signaling in muscle-specific and/or growth factor-related transcription. Plays a critical role in the regulation of neuronal apoptosis (By similarity).

Application Notes

Titration of the MEF2D antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 251-279 from the human protein was used as the immunogen for this MEF2D antibody.

Storage

Aliquot the MEF2D antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
