Description

The protein encoded by this gene is a dual specificity protein kinase that belongs to the MAP kinase kinase family. This kinase specifically activates MAPK8/JNK1 and MAPK9/JNK2, and this kinase itself is phosphorylated and activated by MAP kinase kinase kinases including MAP3K1/MEKK1, MAP3K2/MEKK2, MAP3K3/MEKK5, and MAP4K2/GCK. This kinase is involved in the signal transduction mediating the cell responses to proinflammatory cytokines, and environmental stresses. [RefSeq]

Application Notes

Optimal dilution of the MEK7 antibody should be determined by the researcher.

Immunogen

A synthetic peptide specific to human MEK7 / MAP2K7 was used as the immunogen for the MEK7 antibody.

Storage

Store the MEK7 antibody at -20oC.
