Description

This gene is a member of the myeloid/lymphoid or mixed-lineage leukemia (MLL) family and encodes a protein with an N-terminal PHD zinc finger and a central SET domain. Overexpression of the protein inhibits cell cycle progression. Alternate transcriptional splice variants have been characterized. [provided by RefSeq].

Application Notes

Titration of the MLL5 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 93-120 from the human protein was used as the immunogen for this MLL5 antibody.

Storage

Aliquot the MLL5 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
