Description

MMP9 may play an essential role in local proteolysis of the extracellular matrix and in leukocyte migration. Could play a role in bone osteoclastic resorption. Cleaves KiSS1 at a Gly- \mid -Leu bond. Cleaves type IV and type V collagen into large C-terminal three quarter fragments and shorter N-terminal one quarter fragments. Degrades fibronectin but not laminin or Pz-peptide. [UniProt]

Application Notes

Titration of the MMP9 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 644-673 from the human protein was used as the immunogen for this MMP9 antibody.

Storage

Aliquot the MMP9 antibody and store frozen at -20°C or colder. Avoid repeated freeze-thaw cycles.
