### Description

The protein encoded by the NCK1 gene is one of the signaling and transforming proteins containing Src homology 2 and 3 (SH2 and SH3) domains. It is located in the cytoplasm and is an adaptor protein involved in transducing signals from receptor tyrosine kinases to downstream signal recipients such as RAS. [RefSeq]

### Application Notes

Optimal dilution of the NCK antibody should be determined by the researcher.

## Immunogen

A synthetic peptide specific to human NCK adaptor protein 1 was used as the immunogen for the NCK antibody.

## Storage

Store the NCK antibody at -20oC.
