Description

This gene encodes a nuclear receptor co-repressor that mediates transcriptional silencing of certain target genes. The encoded protein is a member of a family of thyroid hormone- and retinoic acid receptor-associated co-repressors. This protein acts as part of a multisubunit complex which includes histone deacetylases to modify chromatin structure that prevents basal transcriptional activity of target genes. Aberrant expression of this gene is associated with certain cancers. Alternate splicing results in multiple transcript variants encoding different isoforms.

Application Notes

Optimal dilution of the NCOR2 antibody should be determined by the researcher.

Immunogen

E. coli-derived recombinant human protein (amino acids Q6-H2148) was used as the immunogen for the NCOR2 antibody.

Storage

After reconstitution, the NCOR2 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
