NDRG2 antibody western blot analysis in CEM lysate. Predicted molecular weight: ~41kDa.

Description

This gene is a member of the N-myc downregulated gene family which belongs to the alpha/beta hydrolase superfamily. The protein encoded by this gene is a cytoplasmic protein that may play a role in neurite outgrowth. This gene may be involved in glioblastoma carcinogenesis. Several alternatively spliced transcript variants of this gene have been described, but the full-length nature of some of these variants has not been determined.

Application Notes

Titration of the NDRG2 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 42-70 from the human protein was used as the immunogen for this NDRG2 antibody.

Storage

Aliquot the NDRG2 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
