Description

NADH dehydrogenase [ubiquinone] 1 alpha subcomplex subunit 1 (NDUFA1) is an accessory subunit of the mitochondrial membrane respiratory chain NADH dehydrogenase (Complex I), that is believed not to be involved in catalysis. Complex I functions in the transfer of electrons from NADH to the respiratory chain. The immediate electron acceptor for the enzyme is believed to be ubiquinone. [UniProt]

Application Notes

Optimal dilution of the NDUFA1 antibody should be determined by the researcher.

Immunogen

A synthetic peptide specific to human NDUFA1 protein was used as the immunogen for the NDUFA1 antibody.

Storage

Store the NDUFA1 antibody at -20oC.
