Description

The protein encoded by this gene contains a homeobox domain and may be involved in the morphogenesis of the central nervous system. This gene is found on chromosome 20 near NKX2-4, and these two genes appear to be duplicated on chromosome 14 in the form of TITF1 and NKX2-8. The encoded protein is likely to be a nuclear transcription factor.

Application Notes

Titration of the NKX2.2 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 2-2 from the human protein was used as the immunogen for this NKX2.2 antibody.

Storage

Aliquot the NKX2.2 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
