IHC testing of FFPE Ewings sarcoma with NKX2.2 antibody (clone RMNK2-2). HIER: steam sections in pH 9 10mM Tris with 1mM EDTA for 10-20 min.

Description

Expression of NKX2.2 has been found in neuroendocrine tumors of the gut, making it a potential marker for the study of gastrointestinal neuroendocrine tumors. More recently, NKX2.2 protein was identified as a target of EWS-FLI-1, the fusion protein specific to Ewing sarcoma, and was shown to be differentially upregulated in Ewing sarcoma on the basis of array-based gene expression analysis. It acts as a valuable marker for Ewing sarcoma, with a sensitivity of 93% and a specificity of 89%, and aids in the differential diagnosis of small round cell tumors.

Application Notes

Titration of the NKX2.2 antibody may be required for optimal performance.

1. The prediluted format is supplied in a dropper bottle and is optimized for use in IHC. After epitope retrieval step (if required), drip mAb solution onto the tissue section and incubate at RT for 30 min.

Immunogen

A human partial recombinant protein corresponding to amino acids 1-119 was used as the immunogen for this NKX2.2 antibody.

Storage

Store the NKX2.2 antibody at 2-8°C (with azide) or aliquot and store at -20°C or colder (without azide).
