Description

Implicated in commitment to and/or differentiation of the myocardial lineage. Acts as a transcriptional activator of ANF in cooperation with GATA4. It is transcriptionally controlled by PBX1 and acts as a transcriptional repressor of CDKN2B. Together with PBX1, it is required for spleen development through a mechanism that involves CDKN2B repression.

Application Notes

Titration of the Nkx2.5 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

This mouse Nkx2.5 antibody was produced from a rabbit immunized with a KLH conjugated synthetic peptide between 98-133 amino acids.

Storage

Aliquot the Nkx2.5 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
