NONO antibody immunohistochemistry analysis in formalin fixed and paraffin embedded human kidney tissue

Description

This gene encodes 'Non POU domain containing octamer binding protein', or NONO, an RNA-binding protein which plays various roles in the nucleus, including transcriptional regulation and RNA splicing. A rearrangement between this gene and the transcription factor E3 gene has been observed in papillary renal cell carcinoma. Alternatively spliced transcript variants have been described. Pseudogenes exist on Chromosomes 2 and 16. [provided by RefSeq].

Application Notes

Titration of the NONO antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 45-74 from the human protein was used as the immunogen for this NONO antibody.

Storage

Aliquot the NONO antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
