Description

Coup (chicken ovalbumin upstream promoter) transcription factor, also called Nuclear receptor subfamily 2 group F member 1 or NR2F1, binds to the ovalbumin promoter and, in conjunction with another protein (S300-II) stimulates initiation of transcription. Binds to both direct repeats and palindromes of the 5'-AGGTCA-3' motif. Represses transcriptional activity of LHCG. [UniProt]

Application Notes

Optimal dilution of the NR2F1 antibody should be determined by the researcher.

Immunogen

A synthetic peptide specific to human COUP TF1 / NR2F1 was used as the immunogen for the NR2F1 antibody.

Storage

Store the NR2F1 antibody at -20oC.
