Description

This gene encodes a member of the RSK (ribosomal S6 kinase) family of serine/threonine kinases. This kinase contains 2 nonidentical kinase catalytic domains and phosphorylates the S6 ribosomal protein and eucaryotic translation initiation factor 4B. Phosphorylation of S6 leads to an increase in protein synthesis and cell proliferation. [Wiki]

Application Notes

Titration of the p70 S6 Kinase beta antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 452-482 from the human protein was used as the immunogen for this p70 S6 Kinase beta antibody.

Storage

Aliquot the p70 S6 Kinase beta antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
