### Description

PAK proteins are critical effectors that link Rho GTPases to cytoskeleton reorganization and nuclear signaling. PAK proteins serve as targets for the small GTP binding proteins Cdc42 and RAC and have been implicated in a wide range of biological activities. PAK3 forms an activated complex with GTP-bound RAS-like (P21), CDC2 and RAC1 proteins which then catalyzes a variety of targets.

## Application Notes

Optimal dilution of the PAK3 antibody should be determined by the researcher.

## Immunogen

A synthetic peptide specific to human PAK3 was used as the immunogen for the PAK3 antibody.

## Storage

Store the PAK3 antibody at -20oC.
