Description

Proline-, glutamic acid- and leucine-rich protein 1 is a coactivator of estrogen receptor-mediated transcription and a corepressor of other nuclear hormone receptors and sequence-specific transcription factors.

Application Notes

The stated application concentrations are suggested starting points. Titration of the PELP1 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 744-771 from the human protein was used as the immunogen for the PELP1 antibody.

Storage

Aliquot the PELP1 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
