

## Penicillin Antibody [clone Pen-9] (V8979)

Catalog No.	Formulation	Size
V8979-100UG	0.2 mg/ml in 1X PBS with 0.1 mg/ml BSA (US sourced), 0.05% sodium azide	100 ug
V8979-20UG	0.2 mg/ml in 1X PBS with 0.1 mg/ml BSA (US sourced), 0.05% sodium azide	20 ug
V8979SAF-100UG	1 mg/ml in 1X PBS; BSA free, sodium azide free	100 ug

### Bulk quote request

Availability	1-3 business days
Species Reactivity	Species independent
Format	Purified
Host	Mouse
Clonality	Monoclonal (mouse origin)
Isotype	Mouse IgG1, kappa
Clone Name	Pen-9
Purity	Protein A/G affinity
UniProt	Not Applicable
Applications	ELISA : 1-5ug/ml (order BSA-free format for coating)
Limitations	This Penicillin antibody is available for research use only.

SDS-PAGE analysis of purified, BSA-free Penicillin antibody (clone Pen-9) as confirmation of integrity and purity.

## Description

This antibody reacts mainly with the hiazolidine ring of penicillin, but not with the lactam ring. May react with the fused beta lactam/thiazolidine ring of the penicilloyl group and would appear sensitive to modification of the shared N atom of the lactam/thiazolidine ring by substitution or conjugation. It appears insensitive to the structure of the side chain of the penicilloyl group. This antibody reacts with the following penicillin; Benzylpenicillin, Ampicillin, Amoxicillin and

6-Aminopenicillanic acids. Penicillin is a group of Beta-lactam antibiotics used in the treatment of bacterial infections caused by susceptible, usually Gram-positive, organisms. -lactam antibiotics work by inhibiting the formation of peptidoglycan cross-links in the bacterial cell wall, which results in cytolysis. This antibody is useful in the study of allergy to penicillin.

## Application Notes

Optimal dilution of the Penicillin antibody should be determined by the researcher.

## Immunogen

Penicilloyl-transferrin conjugate was used as the immunogen for the Penicillin antibody.

## Storage

Aliquot the Penicillin antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
