Description

PRDX6 is also known as PRX, p29 or AOP2. The protein encoded by this gene is a member of the thiol-specific antioxidant protein family. This protein is a bifunctional enzyme with two distinct active sites. It is involved in redox regulation of the cell; it can reduce H₂O₂ and short chain organic, fatty acid, and phospholipid hydroperoxides. It may play a role in the regulation of phospholipid turnover as well as in protection against oxidative injury.

Application Notes

Optimal dilution of the Peroxiredoxin 6 antibody should be determined by the researcher.

Immunogen

Recombinant human protein (amino acids E15-P224) was used as the immunogen for the Peroxiredoxin 6 antibody.

Storage

After reconstitution, the Peroxiredoxin 6 antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
