Western blot testing of 1) human K562 and 2) mouse testis tissue lysate with PLA2G3 antibody. Predicted molecular weight ~57 kDa but may be observed at higher molecular weights due to glycosylation.

Description

This gene encodes a protein that belongs to the secreted phospholipase A2 family, whose members include the bee venom enzyme. The encoded enzyme functions in lipid metabolism and catalyzes the calcium-dependent hydrolysis of the sn-2 acyl bond of phospholipids to release arachidonic acid and lysophospholipids. This enzyme acts as a negative regulator of ciliogenesis, and may play a role in cancer development by stimulating tumor cell growth and angiogenesis. This gene is associated with oxidative stress, and polymorphisms in this gene are linked to risk for Alzheimer's disease.

Application Notes

Optimal dilution of the PLA2G3 antibody should be determined by the researcher.

Immunogen

An E.coli-derived human recombinant protein (amino acids E74-R358) was used as the immunogen for the PLA2G3 antibody.

Storage

After reconstitution, the PLA2G3 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
