Western blot testing of human lung tissue lysate with Podoplanin antibody. Predicted molecular weight ~25 kDa but may be observed at higher molecular weights due to glycosylation.

IHC staining of FFPE human tonsil tissue with Podoplanin antibody (clone PDPN/8950R). Inset: PBS used in place of primary Ab (secondary Ab negative control).  
HIER: boil tissue sections in pH 9 10mM Tris with 1mM EDTA for 20 min and allow to cool before testing.

SDS-PAGE analysis of purified, BSA-free Podoplanin antibody (clone PDPN/8950R) as confirmation of integrity and purity.

## Description

It recognizes a muco-protein of 38-43kDa, which is identified as Podoplanin (PDPN), also called Glycoprotein 36 (Gp36). It localizes in stromal cells of peripheral lymphoid tissue and thymic epithelial cells. As a regulator of the lymphatic endothelium, podoplanin probably plays a role in maintaining the unique shape of podocytes. It is selectively expressed in lymphatic endothelium as well as lymphoangiomas, Kaposi sarcomas, and in a subset of angiosarcomas with probable lymphatic differentiation. Recent studies have also shown podoplanin to be a highly sensitive and relatively specific marker for epithelioid mesothelioma. Therefore, it can be used in a panel to distinguish mesotheliomas or mesothelial cells from pulmonary carcinomas.

## Application Notes

Optimal dilution of the Podoplanin antibody should be determined by the researcher.

## Immunogen

A recombinant fragment of human PDPN protein was used as the immunogen for the Podoplanin antibody.

## Storage

Aliquot the Podoplanin antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
