Description

Protein arginine methylation plays a role in signal transduction, RNA processing, transcriptional regulation, and DNA repair. PRMT8, a protein arginine N-methyltransferase most closely related to PRMT1, methylates the guanidino nitrogens of arginyl residues in some proteins. This protein associates with the plasma membrane following myristoylation and exhibits a brain-specific expression pattern, making it unique within this family of enzymes.

Application Notes

Titration of the PRMT8 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 344-373 from the human protein was used as the immunogen for this PRMT8 antibody.

Storage

Aliquot the PRMT8 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
