## Description

PRRC1 (Proline-Rich Coiled-Coil 1) is a Protein Coding gene. The PRRC1 gene, located on 5q23.2, is conserved in chimpanzee, Rhesus monkey, dog, cow, mouse, rat, chicken, zebrafish, and frog. The PRCC1 gene has two distinct regions: a proline-rich region on the N-terminus, and the DUF84 region on the C-terminus. PRCC1 is the commonly identified protein name of CAD38605. It encodes for 445 amino acids for a predicted total of 6 exons. The predicted molecular weight is 46.7 kDa, and the isoelectric point is 5.46. Orthologs have been determined in most eukaryotes, the most highly conserved being found in most mammalian species. PRRC1 is widely expressed in the thyroid, endometrium, and other tissues. Diseases associated with PRRC1 include Dystonia 23.

## Application Notes

Optimal dilution of the PRRC1 antibody should be determined by the researcher.

## Immunogen

E. coli-derived recombinant human protein (amino acids Y139-D411) was used as the immunogen for the PRRC1 antibody.

## Storage

After reconstitution, the PRRC1 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
