Description

Sister chromatid cohesion protein PDS5 homolog A is a protein that in humans is encoded by the PDS5A gene. The protein encoded by this gene binds to the cohesin complex and associates with chromatin through most of the cell cycle. The encoded protein may play a role in regulating sister chromatid cohesion during mitosis. Two transcript variants encoding different isoforms have been found for this gene.

Application Notes

Optimal dilution of the PSD5A antibody should be determined by the researcher.

Immunogen

An E. coli-derived human protein (amino acids M1-R1337) was used as the immunogen for the PSD5A antibody.

Storage

After reconstitution, the PSD5A antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
