IHC staining of FFPE human spleen tissue with PTPN6 antibody (clone PTPN6/7543). Inset: PBS used in place of primary Ab (secondary Ab negative control). HIER: boil tissue sections in pH 9 10mM Tris with 1mM EDTA for 20 min and allow to cool before testing.

Description

PTPN6, which is also designated as SHP-1, is expressed primarily in hematopoietic cells and characterized by the presence of two SH2 domains N-terminal to the PTP domain. It maps to 12p13, a region commonly involved in leukemia-associated chromosomal abnormalities. SHP-1 plays a role in modulating intracellular signaling for various molecules. In T-cell lymphomas and other malignancies, SHP-1 phosphatase expression is lost, by a thus far undetermined mechanism. Preliminary studies suggest that it may be helpful in differentiating mantle/marginal zone lymphomas (SHP-1+) from follicular lymphomas (SHP-1 negative).

Application Notes

Optimal dilution of the SHP-1 antibody should be determined by the researcher.

Immunogen

A recombinant partial protein sequence (within amino acids 395-595) from the human protein was used as the immunogen for the PTPN6 antibody.

Storage

Aliquot the SHP-1 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
