Description

Ras-related protein Rab-7a is a protein that in humans is encoded by the RAB7A gene. RAB7A functions as a key regulator in endo-lysosomal trafficking, governs early-to-late endosomal maturation, microtubule minus-end as well as plus-end directed endosomal migration and positions, and endosome-lysosome transport through different protein-protein interaction cascades. Furthermore, RAB7A is involved in regulation of some specialized endosomal membrane trafficking, such as maturation of melanosomes through modulation of SOX10 and the oncogene MYC. Mutations in the lysosomal pathway result in tumor progression in melanoma cells.

Application Notes

Optimal dilution of the RAB7 antibody should be determined by the researcher.

Immunogen

Amino acids KEAINVEQAFQTIARNALKQETEVERLYNEFPEPIKLDKND of human RAB7A were used as the immunogen for the RAB7 antibody.

Storage

After reconstitution, the RAB7 antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
