## Description

Ras GTPase-activating protein nGAP is an enzyme that in humans is encoded by the RASAL2 gene. This gene encodes a protein that contains the GAP-related domain (GRD), a characteristic domain of GTPase-activating proteins (GAPs). GAPs function as activators of Ras superfamily of small GTPases. The protein encoded by this gene is able to complement the defective RasGAP function in a yeast system. Two alternatively spliced transcript variants of this gene encoding distinct isoforms have been reported.

## Application Notes

Optimal dilution of the RASAL2 antibody should be determined by the researcher.

## Immunogen

E. coli-derived recombinant human protein (amino acids Q624-R958) was used as the immunogen for the RASAL2 antibody.

## Storage

After reconstitution, the RASAL2 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
