Description

Interleukin-10 is an anti-inflammatory cytokine. In humans IL-10 is encoded by the IL10 gene. It is capable of inhibiting synthesis of pro-inflammatory cytokines like IFN-gamma, IL-2, IL-3, TNF α and GM-CSF made by cells such as macrophages and regulatory T-cells. IL-10 also displays potent abilities to suppress the antigen presentation capacity of antigen presenting cells.

Application Notes

Variations in secondary/substrate sensitivities and test protocols may require the IL10 antibody to be titrated for optimal performance.

Immunogen

Rat partial recombinant protein (AA 19-178) was used as the immunogen for this IL10 antibody.

Storage

After reconstitution, the IL10 antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
