RBFOX3 Antibody / Fox3 / NeuN [clone NEUN/8096R] (V4561)

Catalog No.	Formulation	Size
V4561-100UG	0.2 mg/ml in 1X PBS with 0.1 mg/ml BSA (US sourced), 0.05% sodium azide	100 ug
V4561-20UG	0.2 mg/ml in 1X PBS with 0.1 mg/ml BSA (US sourced), 0.05% sodium azide	20 ug
V4561SAF-100UG	1 mg/ml in 1X PBS; BSA free, sodium azide free	100 ug

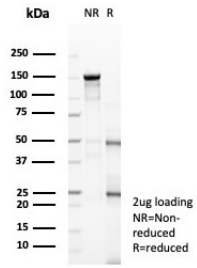

Recombinant RABBIT MONOCLONAL

Bulk quote request

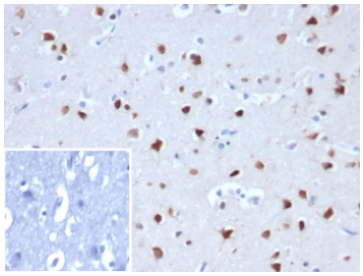

Availability	1-3 business days
Species Reactivity	Human
Format	Purified
Host	Rabbit
Clonality	Recombinant Rabbit Monoclonal
Isotype	Rabbit IgG, kappa
Clone Name	NEUN/8096R
Purity	Protein A/G affinity
UniProt	A6NFN3
Localization	Nucleus, Cytoplasm
Applications	Immunohistochemistry (FFPE): 1-2ug/ml for 30 min at RT Western blot: 2-4ug/ml
Limitations	This RBFOX3 antibody is available for research use only.

RBFOX3 Antibody MOLT4 WB. Western blot analysis of RNA binding fox-1 homolog 3 / RBFOX3 (NeuN) in human MOLT4 cell lysate using rabbit monoclonal RBFOX3 antibody, clone NEUN/8096R. A band is detected at approximately 45â€“50 kDa, consistent with the predicted molecular weight of RBFOX3, supporting detection of this neuronal RNA-binding protein under the conditions tested.

SDS-PAGE analysis of purified, BSA-free RBFOX3 antibody (clone NEUN/8096R) as confirmation of integrity and purity.

RBFOX3 Antibody Human Cerebellum Tissue Immunohistochemistry. IHC staining of FFPE human cerebellum tissue with RBFOX3antibody (clone NEUN/8096R). Inset: PBS used in place of primary Ab (secondary Ab negative control). HIER: boil tissue sections in pH 9 10mM Tris with 1mM EDTA for 20 min and allow to cool before testing.

Description

RBFOX3 Antibody specifically recognizes the DNA-binding, neuron-specific protein NeuN/Rbfox3/Fox3, which is present in most CNS and PNS neuronal cell types of all vertebrates tested. NeuN protein distributions are apparently restricted to neuronal nuclei and some proximal neuronal processes in both fetal and adult brain although, some neurons fail to be recognized by NeuN at all ages: INL retinal cells, Cajal-Retzius cells, Purkinje cells, inferior olivary and dentate nucleus neurons, and sympathetic ganglion cells are examples. Immunohistochemically detectable NeuN protein first appears at developmental timepoints that correspond with the withdrawal of the neuron from the cell cycle and/or with the initiation of terminal differentiation of the neuro. Immunoreactivity appears around E9.5 in the mouse neural tube and is extensive throughout the developing nervous system by E12.5. Strong nuclear staining suggests a nuclear regulatory protein function; however, no evidence currently exists as to whether the NeuN protein antigen has a function in the distal cytoplasm or whether it is merely synthesized there before being transported back into the nucleus. No difference between protein isolated from purified nuclei and whole brain extract on immunoblots has been found.

For a reference RBFOX3 antibody supporting consistent detection of Fox3 / NeuN in neuronal studies, see clone AO-18.

Application Notes

Optimal dilution of the RBFOX3 antibody should be determined by the researcher.

Immunogen

A recombinant partial protein sequence (within amino acids 1-200) from the human protein was used as the immunogen for the RBFOX3 antibody.

Storage

Aliquot the RBFOX3 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
