Description

Protein RCC2 also known as telophase disk protein of 60 kDa (TD-60) or RCC1-like protein TD-60 is a protein that in humans is encoded by the RCC2 gene. The protein encoded by this gene is a guanine exchange factor that is active on RalA, a small GTPase. The encoded protein and RalA are both essential for proper kinetochore-microtubule function in early mitosis. This protein has been shown to be a biomarker for colorectal cancer.

Application Notes

Optimal dilution of the RCC2 antibody should be determined by the researcher.

Immunogen

Recombinant human protein (amino acids K293-L522) was used as the immunogen for the RCC2 antibody.

Storage

After reconstitution, the RCC2 antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
