IHC staining of FFPE human breast carcinoma tissue with recombinant BAP1 antibody (clone BAP1/6861R). Negative control inset: PBS instead of primary antibody to control for secondary binding. HIER: boil tissue sections in pH 9 10mM Tris with 1mM EDTA for 20 min and allow to cool before testing.

Description

The BAP1 gene belongs to the ubiquitin C-terminal hydrolase subfamily of de-ubiquitination enzymes that are involved in the removal of ubiquitin from proteins. The encoded enzyme binds to the breast cancer type 1 susceptibility protein (BRCA1) via the RING finger domain of the latter and acts as a tumor suppressor. In addition, the enzyme may be involved in regulation of transcription, regulation of cell cycle and growth, response to DNA damage and chromatin dynamics. Germ line mutations in this gene may be associated with tumor predisposition syndrome (TPDS), which involves increased risk of cancers including malignant mesothelioma, Uveal melanoma and cutaneous melanoma.

Application Notes

Optimal dilution of the recombinant BAP1 antibody should be determined by the researcher.

Immunogen

A portion of amino acids 400-729 was used as the immunogen for the recombinant BAP1 antibody.

Storage

Aliquot the recombinant BAP1 antibody and store frozen at -20°C or colder. Avoid repeated freeze-thaw cycles.
