Description

It reacts with Bromodeoxyuridine (BrdU) in single stranded DNA (produced by partial denaturation of double stranded DNA), BrdU coupled to a protein carrier, as well as free BrdU. BrdU is a thymidine analog, incorporated into cell nuclei

during DNA synthesis prior to mitosis. Antibody to BrdU is helpful in detecting S-phase cells, providing useful information on the aggressiveness of tumors.

Application Notes

Optimal dilution of the recombinant BrdU antibody should be determined by the researcher.

Immunogen

Bromodeoxyuridine conjugated to KLH was used as the immunogen for the recombinant BrdU antibody.

Storage

Store the recombinant BrdU antibody at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
