SDS-PAGE analysis of purified, BSA-free recombinant Carbonic Anhydrase 9 antibody (clone rPN-15) as confirmation of integrity and purity.

## Description

In normal kidney, CA9 is localized along the brush border of the pars convoluta and pars recta segments of the proximal tubule, as well as focally along the luminal surface of Bowman's capsule adjoining the outgoing proximal tubule. Reportedly, CA9 is expressed by 93% of primary and 84% of metastatic renal cell carcinomas. This MAAb may be useful in the investigations of carcinomas of proximal nephrogenic differentiation especially those showing tubular differentiation.

## Application Notes

Optimal dilution of the recombinant Carbonic Anhydrase 9 antibody should be determined by the researcher.

## Immunogen

Recombinant full-length human CA9 protein was used as the immunogen for the recombinant Carbonic Anhydrase 9 antibody.

## Storage

Aliquot the recombinant Carbonic Anhydrase 9 antibody and store frozen at -20°C or colder. Avoid repeated freeze-thaw cycles.
